Trigonometric ratios

1 Match each of the statements in the column on the left with the appropriate answer from the column on the right.

- | | |
|--|---|
| <p>① Ratio of the length of the side adjacent to an acute angle of a right triangle to the length of its hypotenuse. _____</p> <p>② Ratio of the length of the side opposite of an acute angle of a right triangle to the length of the side adjacent to this angle. _____</p> <p>③ Ratio of the length of the side opposite an acute angle of a right triangle to the length of its hypotenuse. _____</p> | <p>A Acute angle</p> <p>B Obtuse angle</p> <p>C Cosine of an angle</p> <p>D Pythagorean relation</p> <p>E Sine of an angle</p> <p>F Tangent of an angle</p> |
|--|---|

2 a) Considering that each of the following are right triangles, find the measurement of:

- 1) the side opposite angle A
- 2) the side adjacent to angle A
- 3) the hypotenuse

b) Calculate, without using your calculator's **SIN**, **COS** and **TAN** keys, the ratio corresponding to:

- 1) the sine of angle A
- 2) the cosine of angle A
- 3) the tangent of angle A

c) Check your answers in b) using your calculator's **SIN**, **COS** and **TAN** keys.

(cont'd)

3 Consider the adjacent triangle ABC.

a) Using a calculator, find the value for the sine of 20° .

b) Write the equation that can be deduced using the answer obtained in the preceding question and the information provided in the figure.

c) Solve this equation.

d) Find $m \angle B$ and $m \overline{AC}$.

e) Solve the two triangles below using an approach similar to one previously used.

Trigonometric ratios

1 Find the measurement represented by the variable x in each of the triangles below.

a)

b)

c)

2 Solve each of the triangles below.

a)

b)

c)

Name: _____

Group: _____ Date: _____

(cont'd)

- 3** A person walks from point A to point C, passing through point B. The diagram below illustrates this situation. According to the information provided, what distance separates point A from point C?

- 4** The human eye cannot make out objects whose size subtends an angle inferior to 0.16°. The diagram below illustrates this situation.

- a) What is the size of the smallest object an individual can discern if the individual is:
- 1) 50 cm from the object? _____
 - 2) 3.5 m from the object? _____
 - 3) 50 km from the object? _____
- b) In this context, what is the maximum distance an individual can be from an object in order to discern it, if it measures:
- 1) 1 mm? _____
 - 2) 2 cm? _____
 - 3) 15 m? _____

Name: _____

Group: _____ Date: _____

- 5** Roxanne's snowmobile uses 1 L of gas to travel 11 km. Roxanne has to follow the route represented by the dotted line in the adjacent diagram in order to get to the closest service station. If the snowmobile's tank holds 3.5 L of gas, will Roxanne get to the station before running out of gas? Justify your answer.

- 6** As shown in the adjacent illustration, a moving walkway has been installed in a shopping centre so that clients can move between the first and second floors. Safety standards require that the walkway's angle of elevation does not exceed 15° .

- a) What is the shortest possible distance between the wall and the base of the walkway?

- b) What can the shortest length be for the moving walkway?

Trigonometric ratios

1 a) Calculate the following using a calculator.

1) $(\sin 20^\circ)^2 + (\cos 20^\circ)^2$ _____

2) $(\sin 60^\circ)^2 + (\cos 60^\circ)^2$ _____

3) $(\sin 45^\circ)^2 + (\cos 45^\circ)^2$ _____

4) $(\sin 85^\circ)^2 + (\cos 85^\circ)^2$ _____

b) What conjecture can you formulate based on the results obtained in a)?

c) In order to demonstrate this conjecture, complete a proof while referring to triangle ABC below:

1. According to trigonometric ratios you have:

$$\sin A = \frac{a}{c}, \text{ therefore } a = c \times \sin A$$

$$\cos A = \frac{b}{c}, \text{ therefore } b = \underline{\hspace{2cm}}$$

2. Pythagorean theorem additionally shows that:

3. By substituting the expressions obtained in Step 1 for a and b , you have:

$$(c \times \sin A)^2 + \underline{\hspace{2cm}} = c^2$$

4. You will get the following if you continue to simplify the equation algebraically:

$$\underline{\hspace{2cm}} + c^2 \times (\cos A)^2 = c^2$$

5. By removing a common factor, you get:

$$c^2 \times (\underline{\hspace{2cm}} + \underline{\hspace{2cm}}) = c^2$$

6. In order for the equality to be true, you obtain the following:

$$(\sin A)^2 + \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

Name: _____

Group: _____ Date: _____

Number 4

- 4** The table below provides some information on several right triangles ABC with a right angle located at vertex C. Complete the table.

	Length of side adjacent to angle A (cm)	Length of side opposite to angle A (cm)	Length of hypotenuse (cm)	Measurement of angle A (°)	Measurement of angle B (°)
Triangle ①	12		35		
Triangle ②		30	60		
Triangle ③	11.4	15.5			
Triangle ④	45.76			30	
Triangle ⑤			0.45		27
Triangle ⑥	34.5	46	57.5		

Finding missing measurements

1 Calculate the value of each of the following expressions.

- a) $\sin^{-1} 0.95$ _____ b) $\arccos 0.12$ _____
 c) $\arcsin 0.5$ _____ d) $\tan^{-1} 0$ _____
 e) $\cos^{-1} 1$ _____ f) $\arctan \left(\frac{2.2 \text{ cm}}{1.1 \text{ cm}} \right)$ _____

2 Complete the table below.

Expression	Translation	Result
$\arcsin 0.5$	Find the measurement of an angle which has a sin of 0.5.	30°
$\tan^{-1} 232$		
	Find the measurement of an angle for which the cosine is 0.67.	
$\arctan 0.5$		
	In a right triangle, find the measurement of an angle so that the ratio of $\frac{\text{the length of the side adjacent to this angle}}{\text{length of the hypotenuse}}$ is 0.17.	
$\sin^{-1} 0.3$		
	In a right triangle, find the measurement of an angle so that the ratio of $\frac{\text{the length of the side opposite to this angle}}{\text{length of the side adjacent to this angle}}$ is 1.	

3 Find the value of x for each of the expressions below.

- a) $\tan x = 20$ _____ b) $\cos x = \frac{1}{3}$ _____
 c) $\sin (20^\circ + x) = 0.5$ _____ d) $\sin x = 1$ _____
 e) $\tan x = \frac{3}{2}$ _____ f) $\cos 2x = 0.5$ _____

4 Find the measurement of angle B for each of the triangles below.

Name: _____

Group: _____ Date: _____

5 Indicate one of the properties specific to a right triangle containing an angle of 30° .

6 Consider the adjacent triangle ABC.

a) What trigonometric ratio associated with angle A relates the two measurements provided in the figure?

b) What is this ratio?

c) What equation can be formulated using the answers given in a) and b)?

d) Solve this equation using your calculator's arcsin function.

e) Calculate $m \angle B$ and $m \overline{AC}$.

f) Solve the two triangles below using an approach similar to one used above.

Finding missing measurements

1 Calculate the measurement of angle A for each of the triangles below.

m ∠ A _____

m ∠ A _____

m ∠ A _____

2 Solve each of the triangles below.

Name: _____

Group: _____ Date: _____

(cont'd)

3 Considering that Triangles **A**, **B**, **C** and **D** below are right triangles, indicate those which contain an angle measuring 30° . Explain your answers.

	Lengths of the three sides
Triangle A	3 cm, 5.2 cm, 6 cm
Triangle B	35.97 dm, 13.6 dm, 33.3 dm
Triangle C	115.2 mm, 103 mm, 154.53 mm
Triangle D	0.97 m, 1.12 m, 0.56 m

4 Adele constructed the kite shown in the adjacent diagram. Calculate the following:

a) the measure of the angle at the upper end of the kite

b) the kite's perimeter

c) the kite's area

Name: _____

Group: _____ Date: _____

(cont'd)

5 An individual standing 10 m from the base of a building measures the observation angle which permits this individual to see the top of the building. The individual steps back 4 m and measures the angle for a second time. What observation angle is used to take the second measurement?

6 A roof truss is shaped as illustrated below. Using the information provided, calculate the total length of wood required to build the roof truss.

Name: _____

Group: _____ Date: _____

Finding missing measurements

1 Find the measurements for the interior angles of the adjacent triangle ABC if:

a) $m \overline{CD} = \frac{1}{4} \times m \overline{AC}$ and $m \overline{BD} = \frac{1}{3} \times m \overline{AC}$

b) $m \overline{BD} = \frac{1}{2} \times m \overline{AB}$ and $m \overline{BC} = \frac{3}{5} \times m \overline{AB}$

Calculating the area of any triangle

1 The calculator screens shown in the adjacent illustration display several calculations involving the sine of an angle.

a) What property of supplementary angles is demonstrated by these screens?

b) The adjacent triangle ABC has an obtuse angle B. Using the sine law, write an equation which allows you to find $m \angle B$, then solve the equation.

c) Does the answer found in b) seem valid? Justify your answer.

d) Modify your answer using the property stated in a).

e) What must you consider when looking for the measurement of a missing angle using the sine law?

2 Find the measurement represented by the variable x for each of the triangles below.

3 Consider the triangles shown below.

a) Calculate:

- 1) the length of the altitude originating in angle B
 2) the area of triangle ABC using the formula $A = \frac{\text{base} \times \text{height}}{2}$

A

B

C

1) _____

1) _____

1) _____

2) _____

2) _____

2) _____

b) Write the formula which allows you to perform this procedure in a single step.

4 a) Solve the adjacent triangle DEF.

b) Calculate the triangle's half-perimeter.

c) Calculate the triangle's area using Hero's formula.

Calculating the area of any triangle

1 Solve each of the triangles below.

2 Calculate the area of each of the triangles below.

Name: _____

Group: _____ Date: _____

(cont'd)

3 Calculate the area of the right triangle BCD.

4 Consider the two triangles below.

a) What is the area of triangle ABC?

b) Considering that triangles ABC and DEF have the same area, find the measurement of angle F.

c) Explain how you were able to find this measurement.

5 Calculate the measures of the interior angles in the adjacent triangle.

Name: _____

Group: _____ Date: _____

(cont'd)

6 The Bermuda triangle is an area bordered by Florida, the Island of Puerto Rico and the Bermudian archipelago. Many individuals believe that a number of planes and boats have disappeared in this area since the 19th century. The distance between Florida and the Island of Puerto Rico is 1870 km. It is 1560 km between Puerto Rico and Bermuda while the distance between Bermuda and Florida is 1670 km. What is the area of the Bermuda triangle?

7 A ship leaves its home port, travels 45 km to the east, then changes course by 25° . It then travels a distance of 72 km in order to reach its destination. The diagram below illustrates this situation.

a) How far is it from the port to the ship's final destination?

b) A second ship leaves the same port for the same destination. What angle, in relation to the east-west axis, should it follow such that its trajectory is a straight line?

Name: _____

Group: _____ Date: _____

Calculating the area of any triangle

- 1** Calculate the measures of the interior angles of the adjacent triangle ABC.

- 2** The three following expressions allow you to calculate the area of the adjacent triangle ABC. Basing yourself on these expressions, demonstrate the sine law.

$$A = \frac{ab \times \sin C}{2}; A = \frac{bc \times \sin A}{2}; A = \frac{ac \times \sin B}{2}$$

Number 2

- 2** Presuming that the adjacent circle has a radius of 1 dm, complete the following table without using a calculator.

Measure of angle AOB subtended at the centre (°)	Length of chord AB (dm)	Measure of angle AOC subtended at the centre (°)	Sine of angle AOC $\left(\frac{m AC}{m AO} \right)$
0	0.00	0	0
10	0.174	5	0.087
20	0.347	10	0.1735
30	0.518	15	

Name: _____

Group: _____ Date: _____

1 **WHAT A FAMILY!** Students have been invited to complete the table below in order to summarize information about the type of triangles ABC (scalene, right, isosceles or equilateral) to which each of the triangles belongs. Help the students complete the table.

	Triangle ①	Triangle ②	Triangle ③	Triangle ④	Triangle ⑤	Triangle ⑥
$m \angle A$ (°)	26					65.72
$m \angle B$ (°)		60		35		
$m \angle C$ (°)			18.06			
a (cm)	11			13.1	25.7	4.8
b (cm)		13		8	71.08	
c (cm)	19.8		17.02			
$\sin A$			0.31		0.34	
$\sin B$						
$\sin C$		1				0.84
Type

Group: _____ Date: _____

(cont'd)

2 HEIGHT A woodworker wants to make the adjacent figure from a piece of wood. In order to select a piece of wood with the right dimensions, he has to determine the height relative to side AC of triangle ABC. Complete the diagram by calculating this height.

Name: _____

Group: _____ Date: _____

3 THE CHALET Maxime's chalet needs some renovations. He needs to change the roof's asphalt shingling. The chalet is in the shape of a right prism having a right triangular base. A pack of shingles costs \$24.95 and covers 3 m^2 , and labour costs $\$12.50/\text{m}^2$. He also needs to install a heat pump, and must choose one from among the following three models.

Heat pump	Model A (\$300)	Model B (\$500)	Model C (\$650)
Installation cost	\$1,300	\$1,500	\$2,100
Suitable for a dwelling having the following volume:	150 m^3	250 m^3	350 m^3

Calculate the minimum cost of the work.

Name: _____

Group: _____ Date: _____

(cont'd)

4 **GETTING THERE FIRST** Two cars leave at the same time to get from point A to point B. The first car travels at a speed of 80 km/h, while the second car travels at 110 km/h and follows the route represented by the dotted lines in the adjacent diagram. Which car will be the first to arrive at point B? Justify your answer.

Name: _____

Group: _____ Date: _____

(cont'd)

- 5 TRACTORS** In areas where farm vehicles must travel on roads, a sign, as illustrated in the adjacent diagram, is placed on these slow moving vehicles. The sign is in the shape of an equilateral triangle having three congruent isosceles trapezoids at each of its sides. Using the information provided in the diagram, calculate the sign's surface area.

Name: _____

Group: _____ Date: _____

(cont'd)

6 PROVE IT! The lengths of sides AB and BC of the adjacent triangle are fixed while the measurement of angle B can be adjusted. Jacqueline makes the following conjecture related to this situation: the greater the angle at B, the greater the area of triangle ABC.

Using mathematical reasoning, confirm or refute this conjecture.

 \textcircled{C} a) 1) $h \approx 53 \text{ mm}$ 2) $A \approx 2300.04 \text{ mm}^2$
 b) $A = \frac{a \times b \times \sin C}{2}$
4. a) $m \angle E = 69^\circ$
 $m \overline{DF} \approx 69.67 \text{ mm}$
 $m \overline{EF} \approx 40.65 \text{ mm}$
 b) $\approx 91.66 \text{ mm}$
 c) $A \approx 1385.12 \text{ mm}^2$

Consolidation 5.3

Page 19

1. a) $m \angle B \approx 108.06^\circ$ $m \angle C \approx 50.94^\circ$
 $m \overline{AB} \approx 26.22 \text{ cm}$
- b) $m \angle F = 75^\circ$ $m \overline{DF} \approx 1.05 \text{ m}$
 $m \overline{DE} \approx 1.1 \text{ m}$
- c) $m \angle I \approx 18.13^\circ$ $m \angle G \approx 11.87^\circ$
 $m \overline{HI} \approx 18.52 \text{ dm}$
2. a) $A \approx 191.24 \text{ cm}^2$ b) $A \approx 0.35 \text{ m}^2$
 c) $A \approx 1274.63 \text{ cm}^2$

Consolidation 5.3 (cont'd)

Page 20

3. $A \approx 6.57 \text{ mm}^2$
4. a) $A \approx 1.96 \text{ cm}^2$ b) $m \angle F = 146^\circ$
 c) Several answers possible. Example(s):
 The trigonometric formula

$$A = \frac{d \times e \times \sin F}{2}$$

$$1.96 \text{ cm}^2 \approx \frac{2 \text{ cm} \times 3.5 \text{ cm} \times \sin F}{2}$$

$$m \angle F = 146^\circ$$
5. $m \angle A \approx 34.77^\circ$ $m \angle B \approx 58.81^\circ$
 $m \angle C \approx 86.42^\circ$

Consolidation 5.3 (cont'd)

Page 21

6. The surface area of the Bermuda triangle is approximately $1\,229\,089.42 \text{ km}^2$.
7. a) The distance is approximately 114.38 km
 b) The angle in relation to the east-west axis is about 15.43° .

Enrichment 5.3

Page 22

1. $m \angle B \approx 43.61^\circ$ $m \angle C \approx 28.39^\circ$

2. Several answers possible. Example(s):

$$\frac{bc \times \sin A}{2} \times 2 = \frac{ac \times \sin B}{2} \times 2 \quad \frac{bc \times \sin A}{2} \times 2 = \frac{ab \times \sin C}{2} \times 2$$

$$\frac{bc \times \sin A}{c} = \frac{ac \times \sin B}{c} \quad \frac{bc \times \sin A}{b} = \frac{ab \times \sin C}{b}$$

$$\frac{b \times \sin A}{ab} = \frac{a \times \sin B}{ab} \quad \frac{c \times \sin A}{ac} = \frac{a \times \sin C}{ac}$$

$$\frac{\sin A}{a} = \frac{\sin B}{b} \quad \frac{\sin A}{a} = \frac{\sin C}{c}$$

By transivity and the fundamental properties of proportions:

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

4. Car 2 finishes first because it travels the distance in approximately 8.18 min whereas Car 1 travels the same distance in approximately 9.61 min.

Snapshot 5 (cont'd)

Page 28

5. The sign's surface area is approximately 894.32 cm².

Snapshot 5 (cont'd)

Page 29

6. Using the formula $A = \frac{a \times c \times \sin B}{2}$,
you will get $A = \frac{5 \times 2 \times \sin B}{2} = 5 \sin B$.

When an angle is obtuse (greater than 90°), the value of the angle's sine decreases. As a result, when the value of B increases (over 90°), the value of 5 sin B decreases which refutes Jacqueline's conjecture.
